Infrastructure & Configuration Management

April 2022

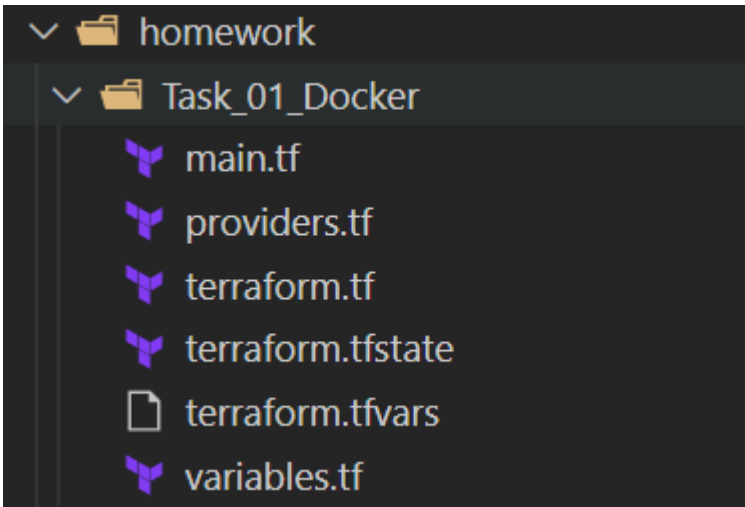

Infrastructure as Code with Terraform
Home Work

Stefan Veselinov

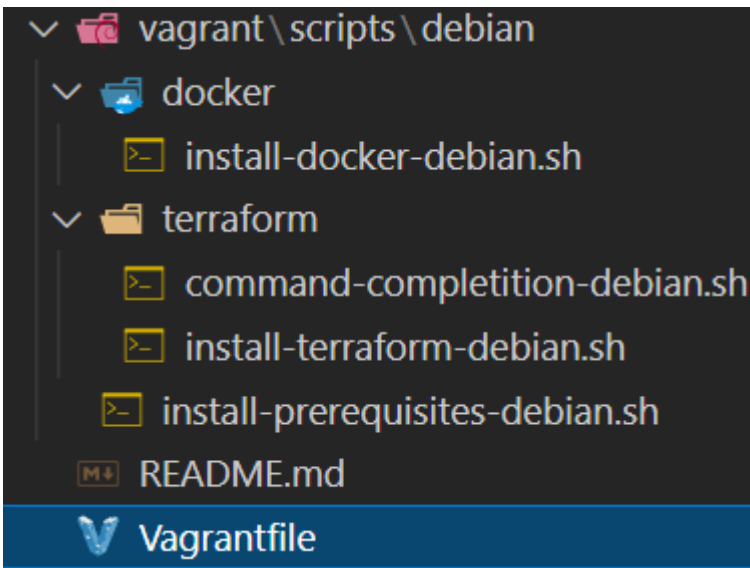

Tasks

1. Create a **Terraform** configuration to build a small containerized application in **Docker** by using the two images. You must provide the containers with connectivity and depending on the approach to mount the **web** folder. For details, check the information in the repository

Solution Structure

- homework
 - Contains the solution of the homework, all terraform files

- vagrant
 - Contains vagrant provisioning scripts for creating Debian VM

Proof: Task 1

- Create homework virtual environment
Open project root and execute `vagrant up` - result of this command is the creation of Debian virtual machine. The VM (terraform) - is provisioned with initial hosts setup, tree, git, nano, curl, wget, unzip, vim, docker, and terraform.
- Prepare VM
 - ssh to vagrant – from project root directory execute `vagrant ssh terraform`
 - Navigate to task 1 folder in vm - `cd /vagrant/homework/Task_01_Docker`
 - Clone project repository - `git clone https://github.com/shekeriev/bgapp.git`
- Run terraform
 - Initiate terraform – execute - `terraform init`

```
vagrant@terraform:/vagrant/homework/Task_01_Docker$ terraform init

Initializing the backend...

Initializing provider plugins...
- Finding kreuzwerker/docker versions matching "2.16.0"...
- Installing kreuzwerker/docker v2.16.0...
- Installed kreuzwerker/docker v2.16.0 (self-signed, key ID BD080C4571C6104C)
```

- Execute - `terraform apply -auto-approve`

```
Plan: 5 to add, 0 to change, 0 to destroy.
